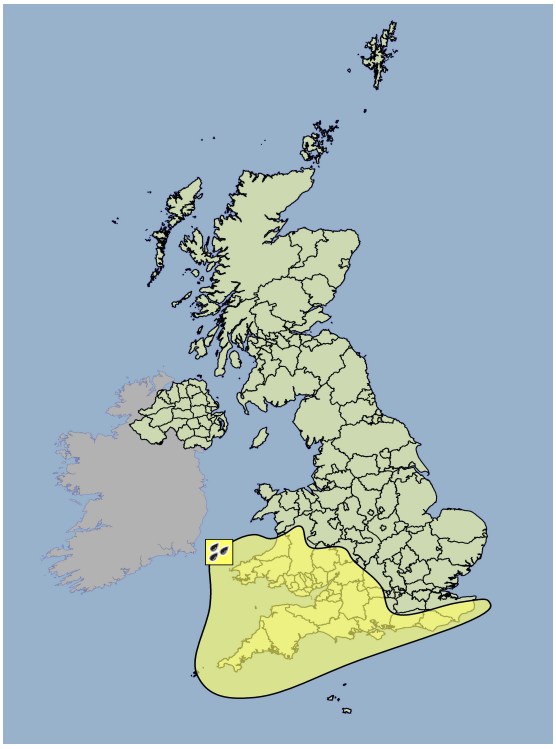
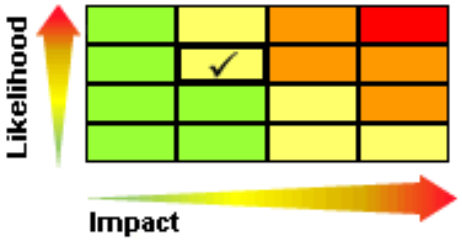
National Severe Weather Warning Service





Chief Forecasters Assessment
A developing frontal system is expected to push north, then east across many parts of the UK during Friday. Rain is expected to become persistent and heavy for a time giving 10-20 mm fairly widely and as much as 40 mm over south-facing hills of southwest England and Wales. A very unstable airmass is likely to follow this more persistent rain, with 10-15 mm in an hour possible in a few places.

With this bout of heavy rain and showers coming after a few wet days, localised flooding is a possibility either from surface water or from some rivers.

There remains some uncertainty regarding the track and timing of this system, so this warning will be updated prior to the event to hone the areas most at risk from disruption due to the heavy rain and subsequent showers.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:10 on Fri, 14th Nov 2014** until **15:00 on Sat, 15th Nov 2014**

A developing frontal system is expected to bring another period of persistent and at times heavy rain to parts of Wales and Southern England on Friday. Rain is likely to be accompanied by strong and gusty winds. As the rain clears, heavy, possibly thundery showers are likely to follow later on Friday and during Saturday.

The public should be aware of the risk of localised flooding.
